PROFESSIONAL SUMMARY

Detail-oriented B.Tech graduate specializing in **Artificial Intelligence** and **Data Science**, skilled in **Python**, **Machine Learning**, and **Large Language Models**. Hands-on experience in developing applications through projects, including a **Retrieval-Augmented Generation** pipeline that achieved a **40%** boost in search accuracy. Prepared to advance AI innovation and operational efficiency in a dynamic technology environment.

WORK EXPERIENCES

Student Innovator

K-tech (NAIN)

Jun 2025 - Present

Belagavi, India

- **Selected** for institutional innovation team to **develop a smart reverse vending system**; gained hands-on experience with embedded hardware, sensors, actuators, and controller-based reward workflows.
- **Analyzed** hardware-software interaction and **participated** in testing and real-world deployment of an IoT-integrated system.

PROJECTS

Semantic-Rag-Search Engine | 🌐 Website

Developer

- **Architected** a core **Semantic Search Engine** using **Hugging Face Transformers** (all-MiniLM-L6-v2) to **transform complex text** into 384-d embeddings, achieving a **40%** boost in meaning-aware search accuracy.
- **Engineered** a scalable vector indexing backend with **ChromaDB** and a decoupled **FastAPI REST API**, enabling cosine-similarity retrievals with **95%** precision and **<50ms** latency.
- **Expanded** the retrieval system into a comprehensive **Retrieval-Augmented Generation (RAG)** pipeline, automating deployment to **Hugging Face Spaces** via a custom **GitHub Actions** CI/CD workflow, leveraging **Large Language Models** for enhanced performance.

Technologies / Tools Used : Python, Transformer Models, ChromaDB, Docker, Large Language Models

Autonomous AI Job Search Agent | 🌐 Website

Developer

- Architected an autonomous 24/7 distributed pipeline using **LangChain** and **BeautifulSoup**, extracting and processing real-time listings at scale from multiple job sources.
- Engineered an **LLaMA-3** semantic matching engine for resume-to-job alignment with **sub-second latency**.
- Developed RESTful APIs via **FastAPI** with **Firestore** for cloud-native (**GCP**) data persistence and frontend integration.
- Automated cover letter generation and skill-gap analysis via **LangChain** tool pipeline, cutting manual prep time by **80%**.
- Utilized **Tableau** and **Power BI** for data visualization and reporting.
- Deployed as a Dockerized microservice with **Telegram API** webhooks for real-time job alerts, implementing **MLOps** and **LLMOps** practices for enhanced operational efficiency.
- Implemented Responsible AI measures to ensure the ethical deployment of AI technologies.

Technologies / Tools Used : Python, LangChain, FastAPI, LLaMA-3, Firestore, Docker, LLMOps

AGRIVERSE- AI

Developer

- **Engineered** a full-stack farmer platform featuring weather forecast, **deep learning-based crop disease detection**, price comparison, bilingual NLP chatbot, and direct-to-consumer crops sales.
- **Fine-tuned MobileNetV2 CNN** using Transfer learning on 81,000+ images, achieved **95.4%** validation accuracy with mobile-first architecture for low-end smartphone deployment.
- **Optimized** distributed training pipeline with CUDA-enabled GPU acceleration, reducing training time by **60%** & achieving **35ms real-time inference latency** at scale.
- **Implemented** a real-time camera capture and offline image upload workflows for scalable, multi-modal disease detection across 38 distinct crop-disease categories.

Technologies / Tools Used : Python, React, Tensorflow

SKILLS

Databases :	MySQL, MongoDB
Frameworks & Libraries :	FastAPI, Scikit-learn, pandas, NumPy
Programming Languages :	Python, Java, JavaScript, SQL
OOPs :	Object Oriented Programming, Data Structures and Algorithms
Tools & Platforms :	Docker, Git, GitHub, Postman, Vercel, Render, HuggingFace

EDUCATIONS

Visvesvaraya Technological University | Belagavi, India

Bachelor of Engineering

Aug 2022 - Jun 2026

CGPA : 8/10

- **Specialization:** Artificial Intelligence and Data Science

AWARDS & ACHIEVEMENTS

Journal Publication:

AGRIVERSEAI – SMART AGRICULTURAL WEB APPLICATION FOR KARNATAKA PEOPLE

Hackathons •

2nd Place, Angadi Institute of Technology and Management Hackathon — awarded for AGRIVERSE, an AI-powered smart agriculture platform.

•Cleared Phase 1 (ML Challenge) of Flipkart Gridlock Hackathon 2.0 (2026), a traffic congestion AI challenge with Bengaluru Traffic Police, built ML models for traffic pattern analysis and image-based traffic recognition.

CERTIFICATIONS

Python Programming Certification — Udemy (Dr. Angela Yu)
