Gmail: supritk149@gmail.com | Phone: +91 70261-05821 | GitHub: <https://github.com/suprit-4618>

Skills

LinkedIn: <https://www.linkedin.com/in/suprit-k-l> | Portfolio: <https://suprit-l.vercel.app/>

Languages: Python | Java | JavaScript

Framework & Libraries: HF Transformers | LangChain | FastAPI | PyTorch

Tools & Technologies: Git | Docker | Vector Databases |

Databases: MySQL | ChromaDB

AI /ML: Scikit-learn | Pandas | NumPy | NLP | RAG | Transfer Learning | Prompt Engineering | LLM Integration

AI & Software Projects

Autonomous AI Job Search Agent | Tech: Python, LangChain, FastAPI, LLaMA-3(Groq API), Firebase, Docker

[Live Demo](#)

- Built an autonomous **24/7 job scouting pipeline** using **LangChain & BeautifulSoup**, extracting real-time listings from Hacker News and remote job boards.
- Engineered an **LLaMA-3 semantic matching** engine for resume-to-job alignment with sub-second latency.
- Developed **RESTful APIs via FastAPI** with Firebase Firestore for cloud-native data persistence and frontend integration.
- Automated cover letter generation and skill-gap analysis via LangChain tool pipeline, cutting manual prep time **by 80%**.
- Deployed as a **Dockerized microservice** with Telegram API webhooks for real-time job alerts.

Semantic-Rag-Search Engine | Tech: Python, Transformer Models, Endee Vector DB, Docker, REST APIs

[Live Demo](#)

- Architected a core Semantic Search engine using HuggingFace Transformers (all-MiniLM-L6-v2) to map complex text into 384-d embeddings, driving a 40% increase in meaning-aware search accuracy.
- Engineered a scalable vector indexing backend with ChromaDB and a decoupled FastAPI REST API, executing cosine-similarity retrievals with 95% precision and <50ms latency.
- Expanded the retrieval system into an end-to-end Retrieval-Augmented Generation (RAG) pipeline, automating its deployment to Hugging Face Spaces via a custom GitHub Actions CI/CD workflow.

AGRIVERSE- AI: AI-powered smart agriculture platform

[Live Demo](#)

- Engineered a full-stack farmer platform featuring weather forecast, deep learning-based crop disease detection, price comparison, bilingual NLP chatbot, and direct-to-consumer crops sales.
- Fine-tuned **MobileNetV2 CNN** using Transfer learning on **81,000+ images**, achieved **95.4%** validation accuracy with mobile-first architecture for low-end smartphone deployment.
- Optimized training pipeline with **CUDA-enabled GPU acceleration**, reducing training time by **60%** & improving real time inference efficiency **with a 35ms average latency**.
- Implemented a real-time camera capture and offline image upload workflows for scalable, multi-modal disease detection across **38 distinct** crop-disease categories.

Experience

Full Stack Web Development Intern

TAP Academy

Bengaluru, India

02/2026 - Present

- Developing an end-to-end food delivery application using Java, MySQL, and React, implementing core features such as authentication, order management, and data persistence.
- Utilizing Git-based workflows for version control and collaboration, while applying debugging techniques and clean code practices across the full application lifecycle and leveraging the code optimization through AI.

Achievement

Student Innovator

K-tech (NAIN)

Belagavi, India

04/2025

- Selected for institutional innovation team to develop a **smart reverse vending system**; gained hands-on experience with embedded hardware, sensors, actuators, and controller-based reward workflows.
- Analyzed hardware-software interaction and participated in testing and real-world deployment of an IoT-integrated system

Education

Bachelor of Engineering

Visvesvaraya Technological University

Belagavi, India

08/2022 – 06/2026

- Major: Artificial Intelligence and Data Science

8/10 CGPA

Certifications

- Python Programming Certification — Udemy (Dr. Angela Yu)
- Machine Learning & Artificial Intelligence Learning Plan (Completed) — Amazon Web Services (AWS)
- HackerRank Certifications: Software Engineer Intern, Python (Basic), SQL (Basic)
