

SUPRIT LENKENNAR

✉ supritk149@gmail.com | 📞 +91 70261-05821 | 🌐 Portfolio | 🐙 GitHub | 🔗 LinkedIn

Skills

Languages: Python | Java | JavaScript |
Framework & Libraries: React | Node.js |
Tools & Technologies: Git | Docker | Apache Airflow |
Databases: MySQL | MongoDB |

AI & Software Projects

- **AGRIVERSE-AI: AI-powered smart agriculture platform** [View](#)
 - Platform for farmers with weather forecast, disease detection, price comparisons, bilingual chatbot, and direct-to-consumer crop sales.
 - Trained and optimized MobileNetV2 CNN models for crop disease detection, selecting a mobile-first architecture suitable for farmer smartphone usage.
 - Improved inference efficiency by ~35% and reduced training time by leveraging CUDA-enabled GPU acceleration for training the model.
 - Trained on a **large-scale dataset (~81,000 images)** and achieved **high prediction accuracy on validation data**.
 - Implemented **live camera capture and image upload workflows** to support real-time and offline disease detection.
- **FRIDAY – Personal AI Desktop Assistant**
 - **Tech:** Python, Google gemini API, edge-tts, JavaScript, HTML, CSS, React [View](#)
 - Developed a voice-controlled AI desktop assistant capable of executing system commands and answering NL queries.
 - Improved assistant response efficiency by 10-15% by replacing the earlier LLM integration.
 - Implemented voice-based automation to open applications, launch web browsers, and perform productivity tasks.
 - Designed an interactive user interface and modular command processing system to support scalable assistant functionality.
- **Crypto ETL Pipeline (Airflow + dbt)**
 - **Tech:** Apache Airflow, dbt, PostgreSQL, Docker, Python, SQL, CoinGecko API
 - Built an end-to-end ETL pipeline using Apache Airflow for workflow orchestration, integrating CoinGecko API for real-time data extraction at 5-minute intervals.
 - Developed data transformation workflows using dbt to process nested JSON data into structured, analytics-ready PostgreSQL tables
 - Implemented a containerized data engineering pipeline using Docker, enabling scalable, reproducible deployment of the modern data stack (MDS).
 - Optimized real-time data processing and data modeling for market analytics while handling API rate limits and ensuring data consistency

Experience

Full Stack Web Development Intern	TAP Academy	Bengaluru, India	02/2026 - Present
• Currently undergoing structured internship training in full stack web development. • Developing web applications using modern technologies, focusing on application flow, API integration, and database connectivity. • Gaining hands-on experience with debugging, version control (Git), and writing clean, maintainable code. • Developing understanding or complete web application lifecycle from frontend to backend.			
Student Innovator	K-tech (NAIN)	Belagavi, India	04/2025 - Present
• Selected as part of the institutional innovation team under the K-tech NAIN program for development of a smart reverse vending system. • Gained hands-on exposure to embedded hardware components, sensors, actuators, and controller-based reward dispensing workflows. • Analysed hardware-software interaction and data flow during system training. • Participated in testing and deployment, gaining insight into real-world hardware software integration.			

Education

Bachelor of Engineering	Vishvesvaraya Technological University	Belagavi, India	08/2022 - Current
• Major in Artificial Intelligence and Data Science			

Certifications

- Python Programming Certification — Udemy (Dr. Angela Yu)
- Machine Learning & Artificial Intelligence Learning Plan (Completed) — Amazon Web Services (AWS)
- HackerRank Certifications: Software Engineer Intern, Python (Basic), SQL (Basic)

Learning & exposure

- Kaggle (datasets, notebooks, competitions), AWS Cloud & AI Services.
- RAG, n8n, vectors, Semantic vectors, LLM integration, Prompt Workflows, LangChain.
- HackerRank Expert Network (technical assessments, problem-solving exposure).
- TensorFlow, sci-kit learn, NLP, pandas, numpy, HF Transformers.
